

## Product Specifications

The USB to LAN Ethernet adapter allows you to connect your PC to an Ethernet Network (LAN) without requiring a normal Ethernet card. Ideal for older computers which don't have Ethernet ports as standard. Hooking up your notebook or desktop computer to a network is now as easy as 1-2-3 with the Agiler 10/100 Base-T Network Adapter. Just plug one end of the cable into the RJ45 receptacle of the Ethernet Adapter and the other end into one port of the supporting hub and you're connected! The device is fully compliant with USB 1.0, 1.1 and 2.0 specifications and supports full and half duplex 10 / 100 modes.
