

Product Specifications

The AGI-1890 HDMI to SVGA Adapter Cable enables you to connect an HDMI output device, such as a laptop video output or digital media extender to a SVGA display device (monitor, projector) by converting the HDMI video signal from the output device into a SVGA output and separate 2-channel analog audio. The HDMI to SVGA adapter is intended for displaying user generated content such as presentations, documents, and work sheets onto a SVGA projector or monitor. The adapter can also extend your computer's desktop to double your workspace and increase productivity.

The versatile converter supports resolutions including high definition 1080p, up to 1920x1200, which eliminates the expense of upgrading a SVGA display for the sake of compatibility, and doesn't require a separate power adapter which saves installation time and hassle.
